

# **PLAY2PREVENT: IS GAMEPLAY BEHAVIOR ASSOCIATED WITH EFFICACY IN RESISTING DRUGS?**

DataFest 2022

Columbia University

Varchasvi Vedula

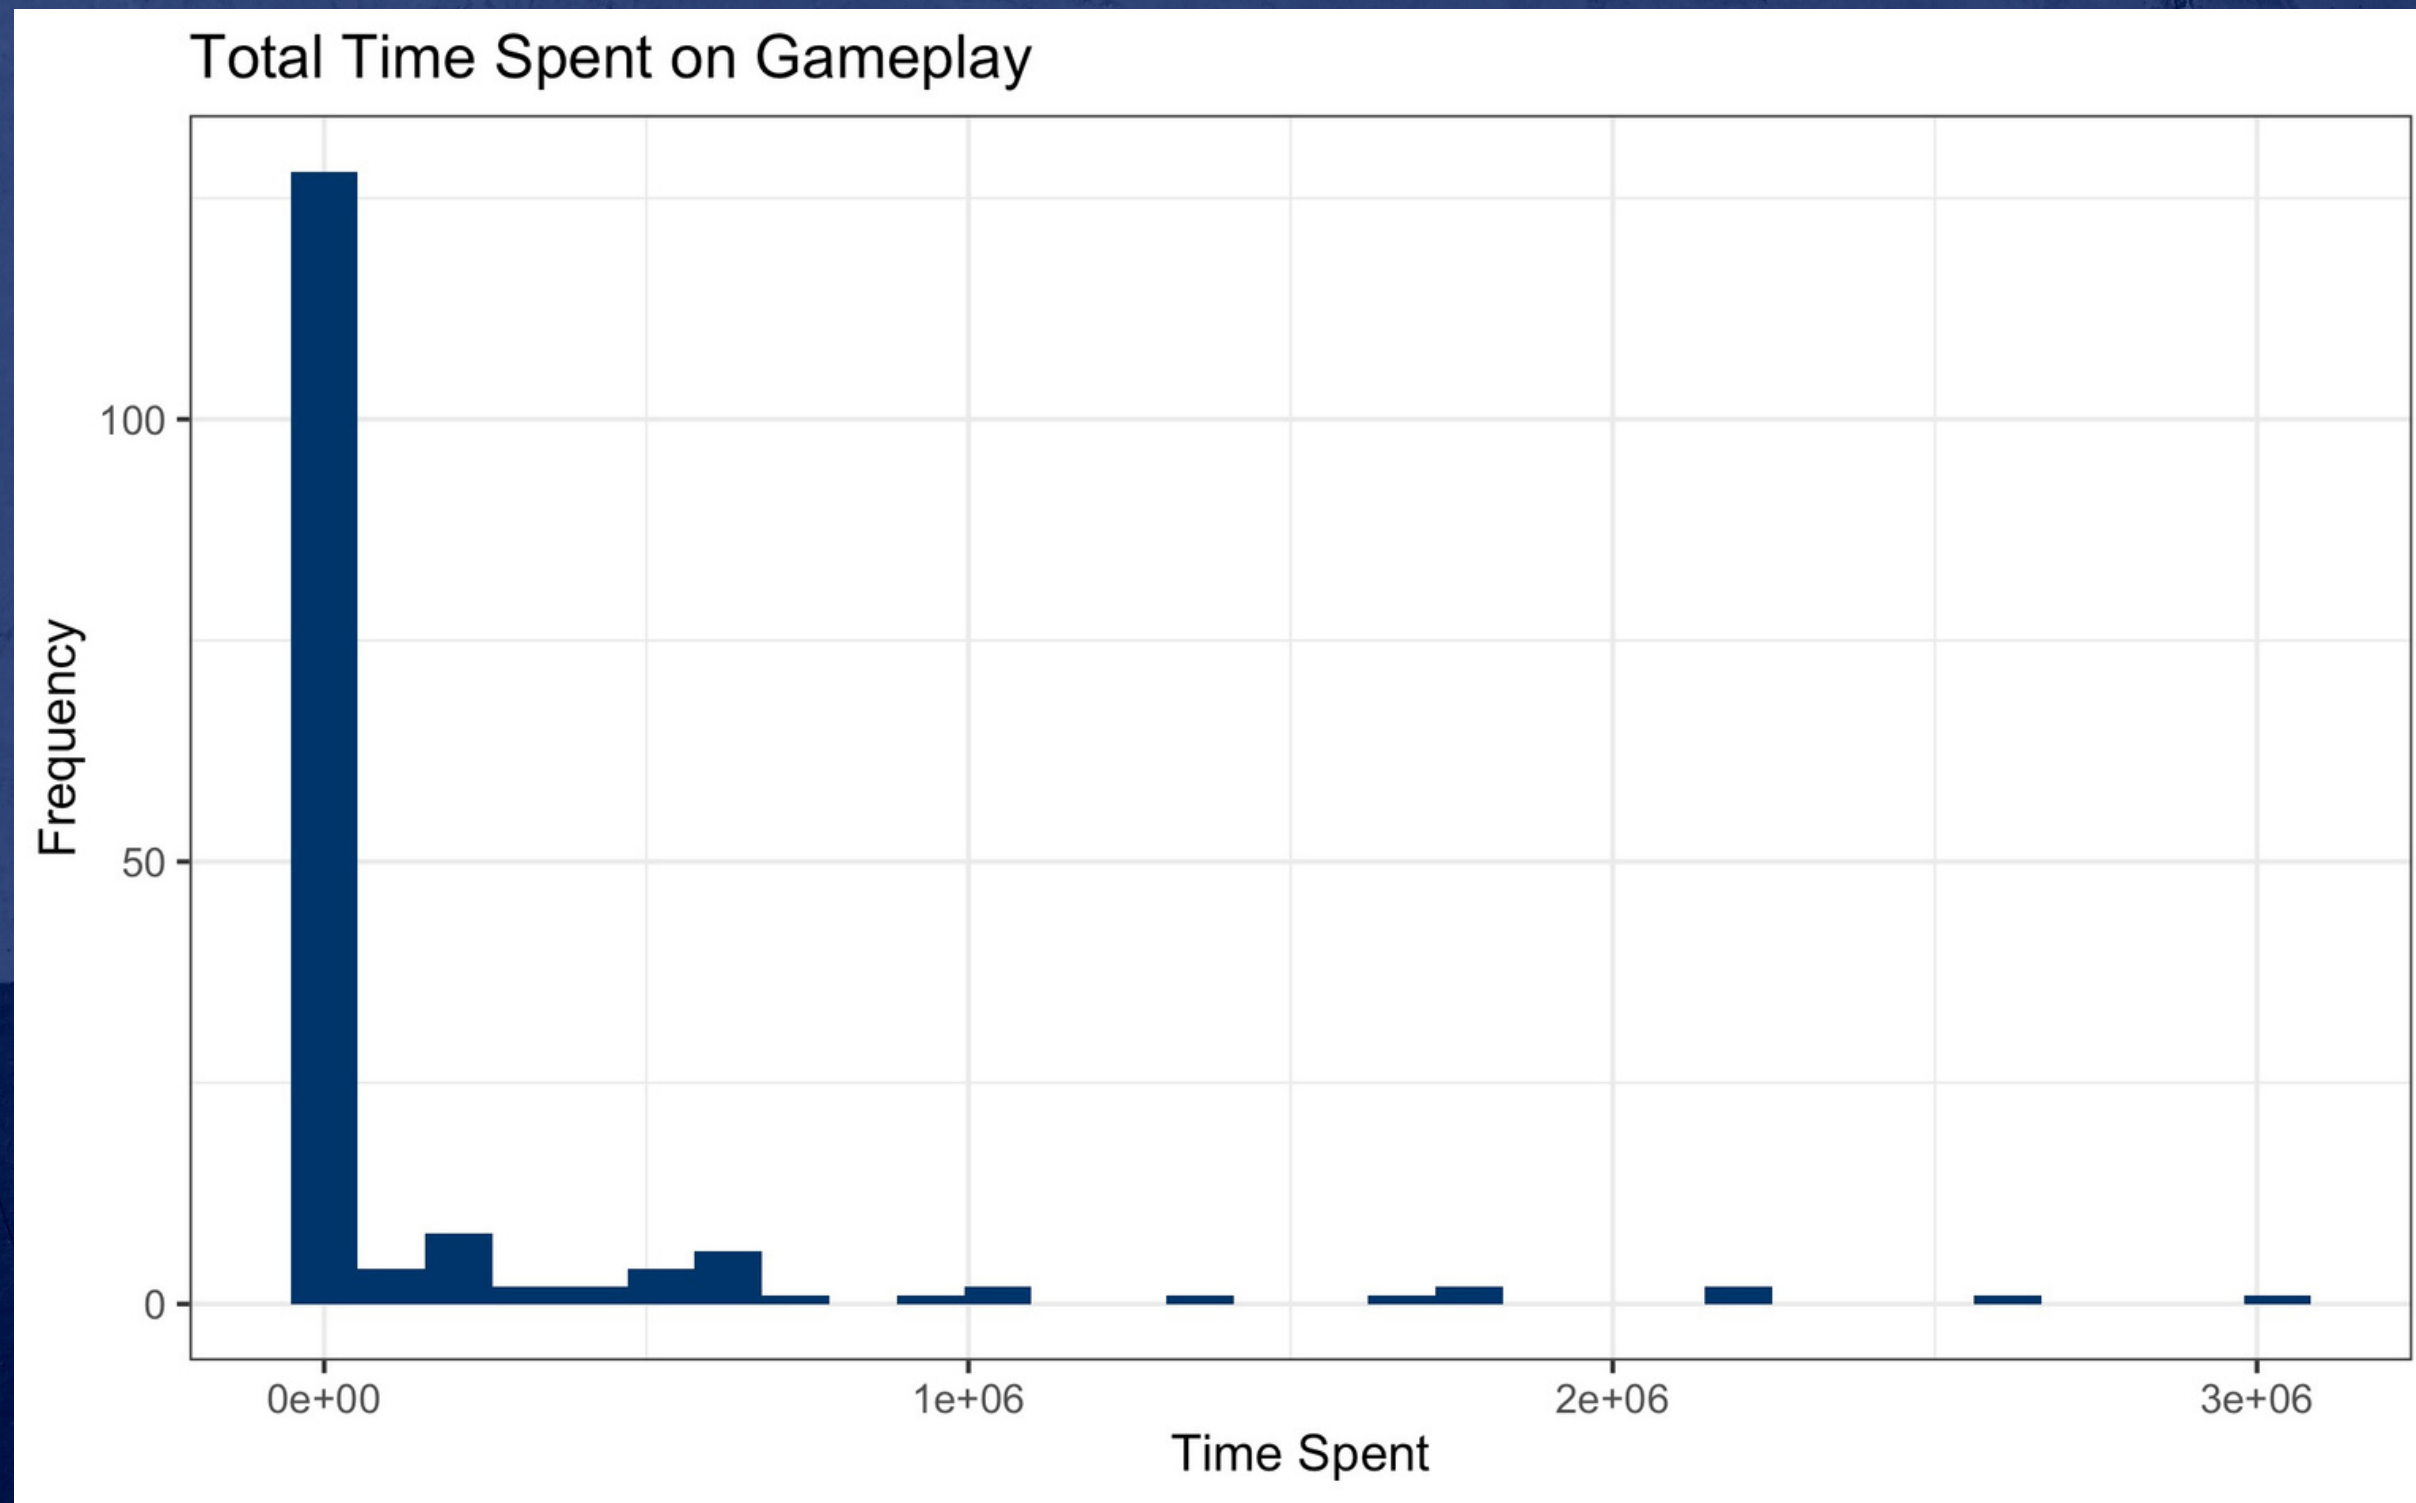

## • **Idea**

Which aspects of gameplay are associated with scores on the post-completion survey? Higher scores are associated with a lower efficacy in resisting drugs.

- Total time spent in gameplay?
- Number of events?

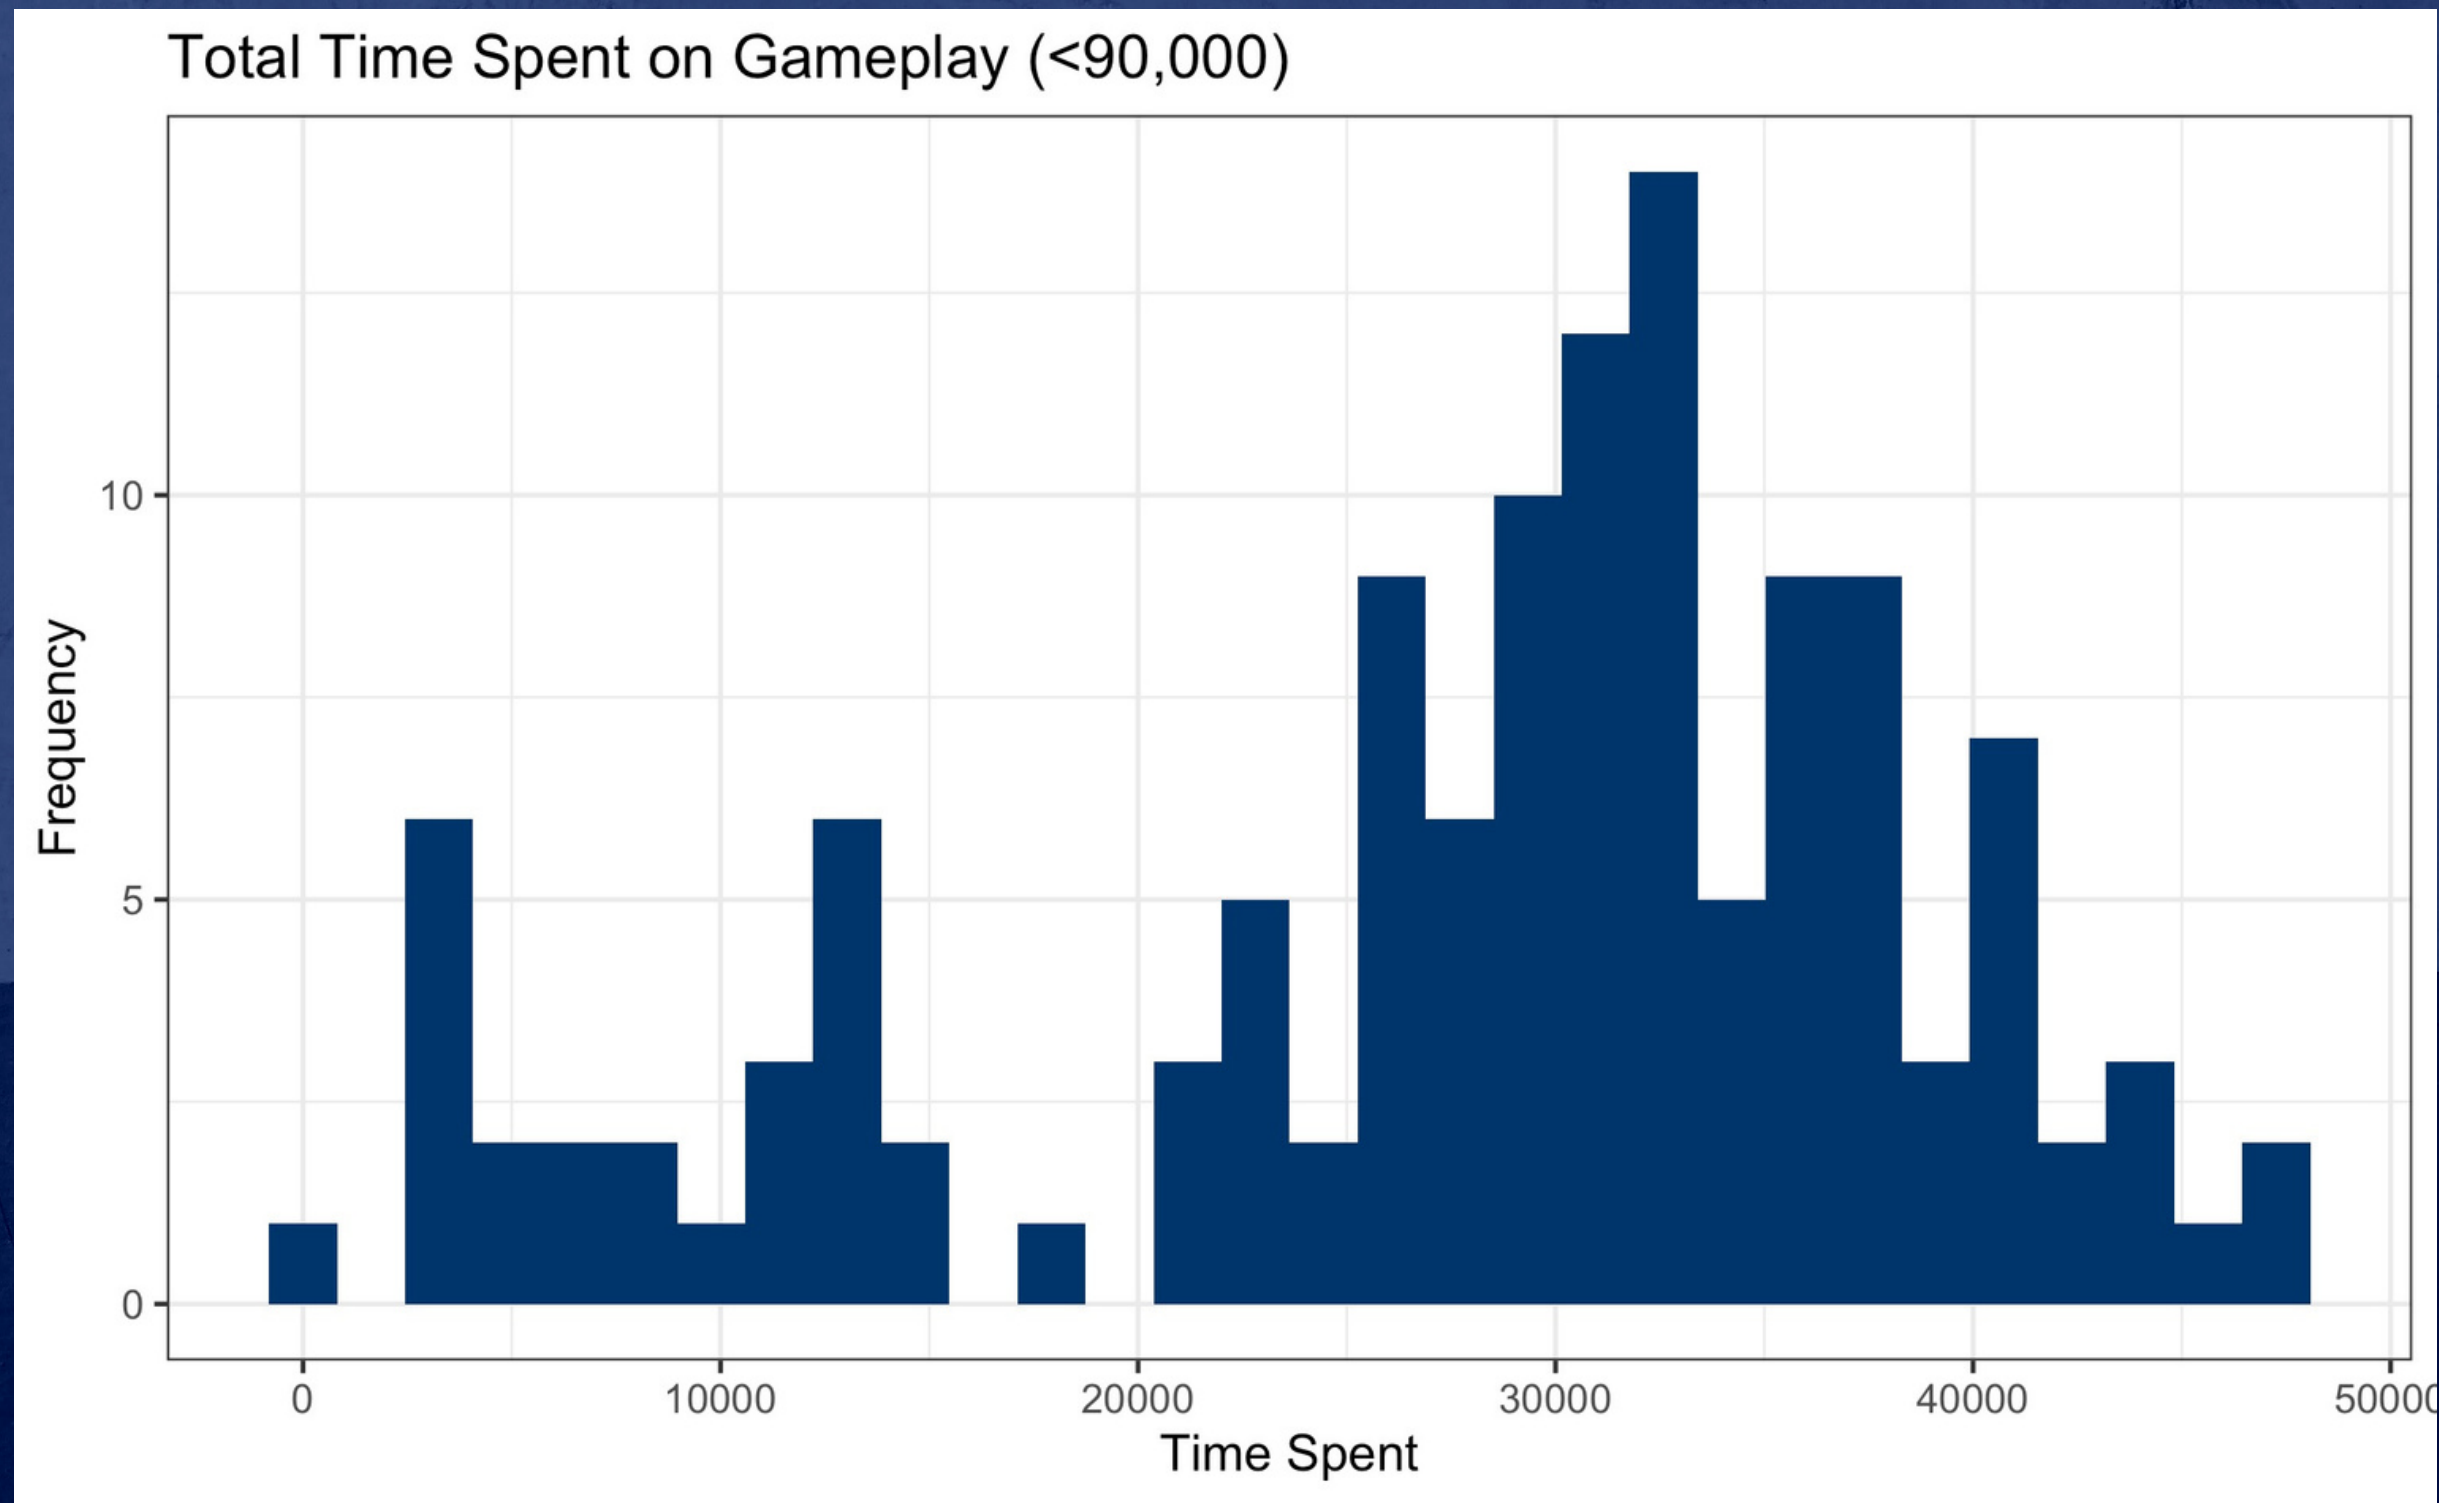

# Let's Explore the Data! : Time Spent

# Let's Explore the Data!: Time Spent

# • **Let's Explore the Data! : Events**

- Calculate the number of different kinds of events the player participated in during the game:
  - Knowledge
  - Priority Sense
  - People Sense
  - Refuse Power
  - Challenge

# Let's Explore the Data! : Knowledge

# • **Model**

- Linear Regression to understand effects
- Player's Mean Score on Survey ~ Total Time Spent + Knowledge + Priority Sense + People Sense + Refuse Power + Challenge

# Model Results

Coefficients:

	Estimate	Std. Error	t value	Pr(> t )	
(Intercept)	3.857e+00	7.911e-02	48.751	< 2e-16	***
knowledge	-8.617e-05	3.215e-05	-2.680	0.00974	**
challenge	-1.200e-05	2.951e-05	-0.407	0.68595	
priority_sense	9.907e-05	6.819e-05	1.453	0.15208	
refuse_power	-2.240e-05	7.048e-05	-0.318	0.75179	
people_sense	5.536e-05	3.129e-05	1.769	0.08250	.
time	1.019e-07	8.649e-08	1.179	0.24368

# • **Model Results**

- Number of Knowledge Events is statistically significant
  - On average, a 1000 increase in the number of Knowledge events corresponds to a 0.08 decrease in the player's mean score
- Others features were not statistically significant

# • Discussion and Conclusion

- Number of Knowledge Events is statistically significant
  - On average, a 1000 increase in the number of Knowledge events corresponds to a 0.8 decrease in the player's mean score
- Others features were not statistically significant
- Suggestions:
  - Add more opportunities in the game to participate in Knowledge Minigames
  - Prioritize showing Knowledge Minigames

**Thank you**
